👤 Profile

Software Engineer specialising in scalable API architecture, system integration, and cloud infrastructure. Experienced in designing robust digital ecosystems within the Google Cloud environment (GCP, Apigee) and managing complex API lifecycles. Leverages a strong full-stack engineering foundation (.NET, React) alongside expertise in database optimisation and cloud deployments. GCP and Azure certified problem-solver focused on bridging high-performance technical architecture with complex business integration needs.

🎓 Education

B.S. Software Engineering, Bahçeşehir University 📄 Sep 2019 – Sep 2023 | Istanbul, Turkey

👛 Professional Experience

API Developer, ISolution Feb 2026 – Present | Riyadh, Saudi Arabia
At **ISolution**, I specialize in turning complex business requirements into clean, scalable API architecture within the Google Cloud ecosystem. My focus is on the intersection of high-performance development and enterprise-grade management.

What I do every day:

- **Develop:** Architecting robust, scalable APIs that serve as the backbone for system integrations and digital transformation.
- **Manage:** Leveraging Google Apigee to centralize fragmented services, overseeing the full lifecycle —from security policies and developer portals to traffic management and analytics.
- **Innovate:** Working within a premier Google Partner environment to deliver cloud-native solutions that scale.

Software Engineer, NVSSOFT 📄

Sep 2024 – Feb 2026 | Riyadh, Saudi Arabia

Product & Deployment

- Developed and maintained interactive dashboards for clients like **KAFD**, the **Ministry of Transport** (MOT), and other government and private sector enterprises, using **React** for the front end and **.NET** for the back end.
- Built **.NET** utility tools to automate tasks such as importing closed correspondences from **Tarasol** into **ArcMate**, creating physical records from Excel files, and more. • Handled full deployment on virtual machines, including **IIS** configuration and server setup, ensuring stable and scalable production environments.

Database Management

- Created and fine-tuned **SQL Server** queries to support real-time data access across various client solutions.
- Created a data warehouse to store pre-aggregated data for faster dashboard loading and smoother performance
- Monitored and troubleshooted database performance to ensure smooth, high-quality data flow and user experience.

Software Development Intern

Jul 2023 – Sep 2023 | Riyadh, Saudi Arabia

Flex Avenues for Communications and IT

Internship involved SQL Server database development, form and report customization using Visual Studio, and extension and API development with X++

 Skills

HTML&CSS

Node.js

Git

SQL

Python

Java

React

Typescript

Docker

Kubernetes

GCP

API Development

Cloud Enginnering

NoSQL

 Projects

- Falcon 9 Data Project  Aug 2024
- Movie App Project  Dec 2023 – Jan 2024
- More Projects 

 Certifications

- Associate Cloud Engineer Certification , Google Aug 2026 – Aug 2029
- Microsoft Certified: Azure Fundamentals , Microsoft Mar 2023 – Jun 2023 | Istanbul, Turkey
- IBM Full Stack Software Developer Professional Certificate , IBM Jan 2024 – Mar 2024
- IBM Data Science Professional Certificate , IBM Apr 2024 – Aug 2024
- Microsoft Power BI Data Analyst Professional Certificate, Microsoft Aug 2024 – present
